Motivated and detail-oriented backend software developer with one year of professional experience and a strong foundation in computer science. Seeking a dynamic and growth-oriented company where I can leverage my skills to contribute to innovative projects while expanding my technical knowledge and professional development.

EDUCATION

Bachelor of Science – Honours Computer Science with Software Engineering

University of Windsor | Windsor, ON | 2019- 2024

WORK EXPERIENCE

AlphaKOR Group - Software Developer

Windsor, ON | Jan 2024 – Current

- Ensured the functionality and reliability of a dozen large-scale, essential business applications
- Prototyping software solutions for client sampling and hardware ideas utilizing Arduino and C++
- Modernized applications based on user feedback and requests by incorporating new features and updating user interfaces using Vue.js, Bootstrap, Tailwind CSS
- Practiced agile development methodologies, managing backlogs, iterations, and user stories to drive project progress
- Applied Test-Driven Development (TDD) practices to maintain high code quality and minimize defects throughout the development lifecycle

AlphaKOR Group - Technical Specialist

Windsor, ON | Jun 2023 – Jan 2024

- Provided exceptional service to clients while resolving software and hardware issues, bugs and computer performance complaints and answering specialized technical questions
- Created, maintained, and updated technical documentation and trained new staff on documentation procedures to ensure quality and timely service
- Collaborated with technical, business and software teams to improve customer experience and enhance user experience in all aspects of the business
- Implemented shell scripting to optimize and automate data request processes to improve data retrieval efficiency for users

PROJECTS

Microblog

- Maintained continuous development using Jenkins for testing and integration of new functionality into existing application
- Improved security features including one-time passcodes, password resets and security questions
- Implemented and managed a SCRUM Agile development methodology to maintain quality, performance, and time expectations

Compound Interest Visualiser

- Designed a learning module for Waterloo Catholic Board based on the Grade 9 curriculum and user stories
- Produced an end-product that demonstrates mathematical concepts to over 1000 students
- Ensured high quality and easy-to-understand code that is used to demonstrate best-code practices for students
